Data Structures

Delegates

Services

GetASTofSourceTreeService

Description

gets the AST of the source tree

extract AST from a source tree

API

- StringBuilder apply(Path rootPath)

dependencies

- WalkTreeService
- GenerateAstService

WalkTreeService

Description

API

- apply(File rootConsumer<File> consumer)

dependencies

GenerateAstService

Description

API

- apply(Path pathAppendable appendable)
- RootNode apply(Path path)

dependencies

- PmdParsingExternalComponent

Repositories

Utilities

TestUtil

API

- diffCollections(Set<T> expectedSet<T> actual)
- String getFileContents(Path path)
- assertStreamEquals(Set<> expectedStream<> actual)
- String loadResourceAsString(String definitionName)

MiscUtil

API

- StackTraceElement getStackElementAtHeight(depth)
- syserr(String message)
- sysout(String message)

LogUtil

API

- addDebuggedClass(Class<> debuggedClass)
- clearDebuggedClasses()
- debug(args)
- debug(depth args)
- warning(args)
- warning(depth args)
- info(args)
- info(depth args)
- doLog(StackTraceElement stackTraceElementLevel level args)

fields

- [private, static] Set<String> debuggedClasses
- [private, static] Logger logger

GeneratorUtil

API

- StringBuilder testDataBoilerPlate(String preamble extendeds)
- StringBuilder testDataTail(StringBuilder builder)
- StringBuilder stubBoilerPlate(String preamble implementeds)
- StringBuilder stubTail(StringBuilder builder)
- StringBuilder generateBoilerPlate(String preambleString extendTypeString pattern implementeds)
- StringBuilder mapToCode(String inputFunction<String> mapperStringBuilder builder)
- StringBuilder mapToCode(Stream<String> inputFunction<String> mapperStringBuilder builder)
- Stream<String> linesOf(String input)
- Function<StringString> stringConstant(String postfix)

Glue

TheClass

API

fields

- `theField`

TheClass

API

fields

- `theField`

TestBase

API

- `setUp()`
- `tearDown()`
- `stubUp(Object test)`
- `stubFill(Object instance)`

Generate

API

- `main( args)`
- `Class<Supplier<StringBuilder>> getGeneratorByName(String className)`

SourceFileNode

API

- `String getPath()`
- `String getXPathNodeName()`
- `Node getChild( index)`
- `getNumChildren()`

fields

- `Node child`
- `String path`

AbstractHackNode

API

- TextRegion getTextRegion()
- DataMap<DataKey<» getUserMap()
- Node getParent()
- getIndexInParent()

GenerateAST

API

- main(args)

SourceTreeNode

API

- Node getChild(index)
- getNumChildren()
- String getXPathNodeName()
- addChild(SourceFileNode child)
- AstInfo<> getAstInfo()

fields

- [] List<SourceFileNode> children

Config

API

LoggerService

API

- debug(args)
- warning(args)
- info(args)
