Services

WalkTreeService

Description

API

- `apply(File rootConsumer<File> consumer)`

dependencies

GetASTofSourceTreeService

Description

extract AST from a source tree

gets the AST of the source tree

API

- `StringBuilder apply(Path rootPath)`

dependencies

- WalkTreeService
- GenerateAstService

GenerateAstService

Description

API

- apply(Path pathAppendable appendable)
- RootNode apply(Path path)

dependencies

- PmdParsingExternalComponent

Repositories

Utilities

Glue

SourceTreeNode

API

- Node getChild(index)
- getNumChildren()
- String getXPathNodeName()
- addChild(SourceFileNode child)
- AstInfo<> getAstInfo()

fields

- [] List<SourceFileNode> children

GenerateAST

API

- main(args)

AbstractHackNode

API

- TextRegion getTextRegion()
- DataMap<DataKey<» getUserMap()

- Node getParent()
- getIndexInParent()

Generate

API

- main(args)
- Class<Supplier<StringBuilder>» getGeneratorByName(String className)

SourceFileNode

API

- String getPath()
- String getXPathNodeName()
- Node getChild(index)
- getNumChildren()

fields

- [] Node child
- [] String path

TheClass

API

fields

- [] theField
